What you need to download for our software project:

1. Mysql

2. Netbeans Java EE (2nd column)
https://netbeans.org/downloads/

3. jdbc connector mysql to java
https://dev.mysql.com/downloads/connector/j/

Follow the installation instructions and all should work fine isa !

If you have a problem with Mysql, you can run your queries on microsoft sql operation studio
(open source), but you will need to download it and the server too
(it isnt very different from mysql as syntax, so the conversion will be easy)
